ALL THINGS  
GREAT  
BUT SMALL  
HOLIDAY FOR 6 STRINGS

10

**10** Peterson thought of everything when it designed the **StrobeStomp** (\$309). The tuner offers  $1/10$ -cent accuracy and can be used with guitar or bass. The device can also be used as an active DI, and the 9V DC output can provide power for other stomp boxes. You can also program your own tuning temperaments. Web: [www.petersontuners.com](http://www.petersontuners.com).

11

**11** The **Z.Vex Nano Head** (\$499) is a colorful 0.5W tube guitar amp with two little duotriodes that are strong enough to power a 4x12 cabinet. The controls include a 3-position highpass switch, a 3-position lowpass switch, a brightness switch (for low-volume use), and a volume control. Web: [www.zvex.com](http://www.zvex.com).

12

**12** Need some space between your instrument and amp without going wireless? The **Little Labs STD Mercenary Edition** (\$140) goes the distance without sacrificing tone or increasing noise in the line. The included cable has a discrete buffer circuit that allows you to use a mic cable or tie line to extend the distance of your instrument cable. Web: [www.littlelabs.com](http://www.littlelabs.com).

13

**13** Whether you are reamping your guitar or bass or running a vocal track through a stompbox, the **Radial X-AMP** (\$200) helps you maintain the proper impedance. This Class-A device has an output-level control, two  $1/4$ -inch outputs (one with transformer isolation and a polarity switch), and separate ground-lift switches on the input and output. Web: [www.radialeng.com](http://www.radialeng.com).
